### **BIOLOGY**

### **PREAMBLE**

This is an examination syllabus drawn up from the curricula of the member countries of the West African Examinations Council. It should be used alongside the appropriate teaching syllabus(es) of the country where the candidates are domiciled.

This examination syllabus is divided into three sections: Sections A, B and C. Section A is for all candidates, Section B is for candidates in Ghana only and Section C is for candidates in Nigeria, Sierra Leone The Gambia and Liberia.

### AIMS AND OBJECTIVES

This syllabus is designed to assess candidates'

- 1 . understanding of the structure and functions of living organisms as well as appreciation of nature;
- 2. acquisition of adequate laboratory and field skills in order to carry out and evaluate experiments and projects in Biology;
- 3. acquisition of necessary scientific skills for example observing, classifying and interpreting biological data;
- 4. acquisition of the basic relevant knowledge in Biology needed for future advanced studies in biological sciences;
- 5. acquisition of scientific attitudes for problem solving;
- 6. ability to apply biological principles in everyday life in matters that affect personal, social, environmental, community health and economic problems;
- 7. awareness of the existence of interrelationships between biology and other scientific disciplines.

### **SCHEME OF EXAMINATION**

There will be three papers: Papers 1, 2 and 3, all of which must be taken. Papers 1 and 2 will be a composite paper to be taken at one sitting.

PAPER 1: Will consist of fifty multiple-choice objective questions drawn from Section A of the syllabus (the section of the syllabus which is common to all countries). It will carry 50 marks and last for 50 minutes.

**PAPER 2:** Will consist of six essay questions drawn from the entire syllabus. The paper will be put into three sections, Sections A, B and C.

**Section A**: Will consist of four questions drawn from Section A of the syllabus.

**Section B**: Will be for candidates in Ghana only and will be drawn from Section B of the syllabus (ie the section of the syllabus perculiar to Ghana). It will consist of short-structured questions.

**Section C**: Will be for candidates in Nigeria, Sierra Leone, The Gambia and Liberia and will be drawn from Section C of the syllabus (ie the section of the syllabus containing material for those countries only). It will also consist of short-structured questions.

Candidates will be expected to answer two questions from Section A and all the short-structured questions from **either** Section B **or** Section C.

Each question in Section A will carry 20 marks while the compulsory short-structured questions in Sections B and C will carry 30 marks. The total score will be 70 marks. The paper shall take 1 hour 40 minutes.

PAPER 3: Will be a practical test (for school candidates) or a test of practical work (for private candidates) lasting 2 hours and consisting of three sections: Sections A, B and C.

**Section A**: This will consist of two compulsory questions drawn from Section A of the syllabus, each carrying 25 marks.

**Section B**: This will be for candidates in Ghana only. It will consist of one question drawn from Section B of the syllabus and will carry 30 marks.

**Section C**: This will be for candidates in Nigeria, Sierra Leone, The Gambia and Liberia. It will consist of one question drawn from Section C of the syllabus and will carry 30 marks.

Candidates will be expected to answer all the questions in Section A and one question in either Section B or C. The paper will carry a total score of 80 marks.

### **DETAILED SYLLABUS**

## **SECTION A**

(For all candidates)

	CONTENTS	NOTES
A.	Concept of Living  1. Classification (a) Living and non-living things	Classification of objects into living and nonliving, giving examples of each group. Viruses should be mentioned as a link between living and non living things.
	(b) Classification of living things into Kingdoms: Monera, Protoctista (Protista), Fungi, Plantae, Animalia.	Kingdom Monera (Prokaryotes), single-celled, motile or non-motile organisms without definite nucleus e.g. bacteria and blue-green algae.
		Major characteristics of the major phyla of Kingdoms Protoctista and Fungi.
		Kingdom Protista (Eukaryotes), single-celled, motile or non-motile organisms. Cell structure complex with definite nucleus e.g. <i>Chlamydomonas</i> , <i>Amoeba</i> .  Major phyla of Kingdom Protoctista include: Rhizopoda, Zoomastigina, Apicomplexa, Ciliophora, Euglenophyta, Oomycota, Chlorophyta, Rhodophyta and Phaeophyta.
		Kingdom Fungi (Eukaryotes), mainly non-motile organisms composed of hyphae containing nuclei e.g. moulds, mushrooms and <i>Rhizopus</i> .  Major phyla of Kingdom Fungi include: Zygomycota, Ascomycota and Basidiomycota.
		Kingdom Plantae (Eukaryotes), mainly multicellular non-motile organisms which contain chlorophyll that enable them to photosynthesize e.g. mosses, ferns, pines, oil palms and yam plants. Characteristics of the major divisions and classes: Bryophyta (Hepaticae, Musci), Lycopodophyta, Filicinophyta, Coniferophyta, Cycadophyta and

Angiospermophyta (Monocotyledoneae and Dicotyledoneae). Kingdom Animalia (Eukaryotes), multicellular motile organisms that feed on other organisms e.g. corals, worms, insects, snails, fishes, frogs, snakes, monkeys cows. Characteristics of the major phyla and classes of Kingdom Animalia. The external features of the following organisms should be mentioned: cockroach, butterfly, Tilapia, toad/frog, lizard, domestic fowl/pigeon. (c) Differences between plants and animals. 2. Organization of life Levels of organization (a) (i) cell (single-celled organisms): The examples should be used to illustrate Amoeba, Euglena, Paramecium differentiation and specialization in organisms. (ii) Tissue: Hydra (iii) Organ (storage organ) bulb, rhizome and heart. (iv) System/Organ System: In mammals, flowering plants reproductive system, excretory system etc. Complexity of organization The significance of different levels of (b) in higher organisms: organization including volume/surface area ratio should be mentioned advantages and disadvantages. The structure of these organisms in relation to Forms in which living cells exist: 3. the forms of existence should be studied to Single and free-living: illustrate dependence and interdependence. (a) Amoeba, Paramecium, Euglena, and

		Chlamydomonas	
	(b)	Colony: Volvox	
	(c)	Filament: Spirogyra	
	(d)	Part of a living organism: Cheek cells, onion root tip cells and epidermis of fleshy leaves.	Distinguish groups of cells that form tissues from those that form colonies or filaments.
4. (	(a)	Cell structure and functions of cell components.	Cell structure should include: Cell wall, cell membrane, nucleus, cytoplasm, cytoplasmic organelles: mitochondria, lysosomes, chloroplasts, endoplasmic reticulum, ribosomes, centrosomes, Golgi bodies, chromosomes. The function performed by organelles should be known.
	(t	o) Similarities and differences between plant and animal cells.	
5.		e Cell and its environment: Physical and physical processes.	The significance of these processes should be mentioned as factors that affect cell activities
	(a) (b) (c)	diffusion osmosis active transport	in its environment.  Haemolysis, plasmolysis, turgidity and crenation should be mentioned.
6.	•	oerties and functions of the living cell  Nutrition	These should be mentioned as processes occurring within living cells.
		(i) Autotrophic (photosynthesis)	Nutrition in <i>Euglena</i> , <i>Chlamydomonas</i> and <i>Spirogyra</i> should be mentioned.
		(ii) Heterotrophic (holozoic)	Nutrition in <i>Amoeba</i> and <i>Paramecium</i> should be mentioned.
	(b)	Cellular respiration	
		Definition and processes of:	A simplified outline of the chemical processes involved in glycolysis and Kreb's cycle; Reference should be made to the role
		(i) aerobic respiration	of ATP.
		(ii) anaerobic respiration	The importance of anaerobic respiration in

(iii) energy release

food processing should be mentioned.

	(iii) energy release	lood processing should be includined.
(c)	Excretion  (i) Excretion in single-celled aquatic organisms. Diffusion by body surface and by contractile vacuole.	
	(ii) Waste products of metabolism.	Reference should be made to carbon dioxide, water and ammonia as examples of waste products.
(d)	Growth	
	(i) Basis of growth - cell division (mitosis), enlargement and differentiation.	
	<ul><li>(ii) Aspects of growth:     Increase in dry weight, irreversible     increase in size and length and increase     in number of cells.</li></ul>	
	(iii) Regions of fastest growth in plants.	Observation of root tip and shoot tip are required.
	(iv) Influence of growth hormones and auxins.	Regulation of growth by hormones should be mentioned.
	(v) Growth curvatures (Tropisms)	Types of tropisms should be demonstrated.
		Microscopic examination of the different regions of growth and development: region of cell division, elongation, differentiation and maturation.
(e)	Development: Enlargement and differentiation.	Processes that result in primary and secondary growth.
(f)	Movement	
	<ul><li>(i) Organelles for movement: cilia and flagella,</li><li>(ii) Cyclosis.</li></ul>	

(g) Reproduction:

Types of reproduction.

- (i) Asexual: fission, budding and vegetative propagation.
- (ii) Sexual: Conjugation, formation of male and female gametes (gametogenesis), fusion of gametes fertilization)
- 7. (a) Tissues and supporting systems: Skeleton and supporting systems in animals:
  - (i) Biological significance.
  - (ii) Skeletal materials, e.g. bone, cartilage and chitin.
  - (iii) Types of skeleton: exoskeleton, endoskeleton and hydrostatic skeleton.
  - (iv) Bones of the vertebral column, girdles and long bones of the appendicular skeleton.
  - (v) Mechanism of support in animals.
  - (vi) Functions of skeleton in animals: Protection, support, locomotion and respiratory movement.
- (b) Different types of supporting tissues in plants.
  - (i) Main features of supporting tissues in plants.
  - (ii) Functions of supporting tissues in

Prepared slides of:

- (a) fission in *Paramecium*
- (b) budding in yeast and *Chlamydomonas*; should be observed and drawn.

Prepared slides of conjugation in Paramecium and Spirogyra should be studied. The process of meiosis should be mentioned.

The location and arrangement of skeletal and supporting tissues in animals should be mentioned. Candidates should be familiar with the general plan of mammalian skeleton and the different types of joints. They should be able to identify, draw, label and state the functions of the individual bones listed in the content column. Detailed structure of the skull will **not** be required. Histological structure of bones and cartilages will also **not** be required.

Candidates should be able to explain how these functions are performed. The relationship of skeleton and muscles during movement should be used to illustrate the different functions of the skeleton.

The different types of supporting tissues: turgid parenchyma, collenchyma, xylem (wood) sclerenchyma should be studied.

Candidates should be able to cut and draw the low power of the T.S. of stem and root of a herbaceous plant and label the different tissues; epidermis, cortex and stele.

plants: strength, rigidity
(resistance against the forces of
the wind and water), flexibility
and resilience.

- 8. Transport System:
  - (a) Need for transport:
    - (i) surface area/volume ratio.
    - (ii) substances have to move greater distances.
    - (b) Transport in animals.
      - (i) Structure of the heart, arteries, veins and capillaries.
      - (ii) Composition and function of blood and lymph.
      - (iii) Materials for transport: excretory products, gases, digested food, and other nutrients.
- (c) Transport in plants
  - (i) Uptake and movement of water and mineral salts in plants.
  - (ii) Translocation

(iii) Transpiration

Source of materials and forms in which they are transported and where they are transported to should be studied.

Media of transport: cytoplasm in cells, cell sap or latex in most plants and body fluid in invertebrates.

Candidates should be familiar with the general circulatory system. Open circulatory systems in invertebrates. The names of the blood vessels responsible for transporting excretory products, gases, digested food and other nutrients should be mentioned.

Description of uptake of water and mineral salts from the soil into a plant. Movement of water and mineral salts through the plant. Experiments using eosin solution to show water and mineral salts uptake.

Movement of organic materials from leaves to roots. Basic theories (Pressure flow hypothesis and cytoplasmic streaming) underlying translocation.

Ringing experiment to demonstrate that transport of synthesized organic nutrients

(iv) Movement of water to the apex of trees and herbs. occurs through the phloem.

Advantages and disadvantages of transpiration. Types of transpiration. Environmental factors affecting transpiration. Determination of the rate of transpiration.

Physiological factors affecting the rise of water in the xylem: Root pressure, transpiration, cohesion-tension mechanism, adhesion, water potential gradient. Experiments to measure the rate of transpiration.

Characteristics of respiratory surfaces in these systems should be studied. Respiratory organs of insects should be mentioned.

- 9. Respiratory System:
  - (a) Body surface: cutaneous, gills and lungs.

(b) Mechanisms of gaseous exchange in fish, toad, mammals and plants.

10. Excretory Systems and Mechanisms
Types of excretory systems: Kidney, stomata
and lenticels

Candidates should be able to observe, draw and label the respiratory organs of a bony fish (e.g. *Tilapia*) and a small mammal (e.g. rat)

Respiratory movements in these animals should be mentioned. The mechanisms of opening and closing of stomata should be mentioned.

Characteristics of excretory organs in these systems should be studied. Candidates should observe, draw and label the excretory organs of a small mammal (e.g. rat).

Explanation of the concept of excretion in plants. Excretory products of plants (water, carbon dioxide, oxygen, alkaloids, tannins, gums, resins and acids) should be mentioned.

Osmoregulation, excretion and maintenance of acid-base balance should be mentioned. The conditions that affect functions of the kidney such as the water and salt content of the blood, environmental temperature should also be mentioned.

- 11. Regulation of Internal Environment (Homeostasis)
  - (a) Kidney: Structure and functions

(b) Liver:

Functions of the liver.

(c) The skin:

Structure and function.

- 12. Hormonal Coordination
  - (a) Animal hormones:
    Site of secretion, functions and effects of over and under-secretion.

(b) Plant hormones

- 13. Nervous Coordination
  - (a) The central nervous system
    - (i) Components of the central nervous system
    - (ii) Parts of the brain and their functions; cerebrum, cerebellum, medulla oblongata, hypothalamus and their functions
    - (iii) Structure and function of the Spinal Cord.
  - (b) Peripheral Nervous System.
    - (i) Somatic Nervous System
    - (ii) Autonomic nervous system.
    - (iii) Structure and functions of the neurone.

Excretory products such as urea, water, salts, uric acid should be mentioned.

Candidates should be able to identify the liver; and its position relative to the gall bladder, bile duct, pancreas, duodenum and stomach.

Candidates should observe, draw and label the mammalian skin. The regulation of internal environment by the skin should be emphasized.

Endocrine glands: pituitary, thyroid, adrenal, pancreas, gonads and their secretions should be mentioned. The stages in the metamorphosis of toad and the role of thyroxine should be mentioned.

The effects of auxins on lateral bud development, leaf fall and initiation of adventitious roots should be mentioned. Reference to crop harvesting, growth and weed control should be made.

Candidates should be able to locate the position of the brain and spinal cord in a dissected vertebrate and identify the various regions of the brain.

Functions of the sympathetic and parasympathetic systems only.

(iv) Classification of neurones. Candidates should observe, draw and label a neurone from a slide. (c) Types of nervous actions Afferent (sensory), efferent (motor) and (i) The reflex arc intermediate neurones should be mentioned (ii) Reflex and voluntary actions (iii) Differences between reflex and voluntary actions. Candidates should perform experiments to illustrate reflex actions such as blinking of the (iv) Conditioned reflex and its role on eyes, knee jerk and withdrawal of hand from behaviour hot objects. Sense Organs: Structure and function of Candidates should be able to enumerate the conditioned reflexes such as salivation, driving a car, walking and swimming. (a) Eye. Candidates should examine the mammalian eye noting the shape, colour and positions of (b) Ear. the optic muscle and optic nerve. Mention should be made of eye defects and their corrections. 15 (a) Reproductive system of mammals Structure and function of male (i) and female reproductive systems. Differences between male and (ii) female reproductive organs. Candidates should examine and draw dissected male and female small mammals Structure of the gametes showing the reproductive organs. They (sperm and ovum) should also draw sperm and ovum from prepared slides. Fertilization, development of the (iv) embryo and birth. (v) Birth control

(b) Metamorphosis in insects, life histories of butterfly and cockroach. Explanation of the different methods of birth control. These examples should be used to illustrate complete and incomplete metamorphosis. The period it takes to develop from egg to adult should be studied. The different stages in the Comparison of reproduction (c) life history of butterfly and cockroach should in fish, amphibian, reptile, bird be drawn and labelled. and mammal. Reproduction in flowering (d) Reference should be made to the method of plants fertilization, number of eggs and parental care. Arrangements of floral parts of a (i) named insect-pollinated flower and a named wind-pollinated flower. Structure and function of the male and (ii) female parts of a flower. (e) Pollination in Plants (i) Types of pollination (ii) Features of cross-pollinated and self-pollinated flowers (iii) Agents of Pollination Named examples should be used to illustrate the types of pollination. (iv) Kinds of placentation: axile, marginal and parietal. (f) Process of development of The features of the flower should be related zygote in flowering plants: to the agents of pollination. Fertilization Pollen grains germinated in sucrose solution should be observed, prepared slides or charts (g) (i) Types of fruits (classification). showing various stages of embryo

development in flowering plants should be (ii) Structure of fruits observed and drawn. Fruits should be classified into dry and fleshy fruits. The internal structure of a leguminous fruit, orange, maize and tomato should be examined and drawn (h) Dispersal of fruits and seeds: Agents of dispersal The following fruits should be studied as examples to show the features that aid their respective methods of dispersal. Sunflower (achene) Combretum, cotton, Crotalaria/bean, Desmodium, Bidens sp. В. **Plant and Animal Nutrition** 1. Plant Nutrition *Tridax sp.* and Coconut. Distinguishing differences between a fruit Photosynthesis: (a) and a seed should be mentioned Process of photosynthesis and its chemical equation Biochemical nature of photosynthesis, Light and dark reactions (ii) photoactivation of chlorophyll resulting in the conversion of light energy to ATP and the (iii) Materials and conditions necessary for photosynthesis reduction of NADP (Biochemical detail is **not** required) (iv) Evidence of photosynthesis (b) Mineral requirement of plants The translocating and storage of excess food as a result of photosynthesis should be (i) Mineral nutrition: Macro and mentioned. Test for starch in green leaves should be micro-nutrients carried out. Fate of the products of photosynthesis should be mentioned.

(ii) Soil and atmosphere as sources of mineral elements. Macro elements should include: carbon, hydrogen, oxygen, nitrogen, potassium, phosphorus, magnesium, sulphur, calcium and iron. The micro elements should include: copper, manganese, zinc and boron. **Animal Nutrition** Candidates should distinguish between food produced and mineral elements. (a) Food substances; classes and sources (b) Balanced diet and its importance Local examples as sources of food substance should be given. Reference should be made to food relationship between plants and animals. (c) Food tests Importance of each class of food in a balanced diet should be stressed. Candidates should relate the idea of balanced diet to their (d) Digestive enzymes: own diet. Malnutrition and its effects on Classes, characteristics and humans should be mentioned. functions Tests for starch, reducing sugar, protein, fats and oil should be carried out. Candidates should perform experiments to show that ptyalin in saliva changes cooked starch to reducing sugar. Candidates should know source, site of action, substrate and effect of each digestive enzyme. (e) Modes of Nutrition Experiments to show the characteristics of (i) Autotrophic: Photosynthesis, enzymes, including effects of pH, temperature and concentration should be (ii) Heterotrophic: holozoic, parasitic, symbiotic and saprophytic. carried out. Alimentary System: (f)

Alimentary tract of different animals.

Named examples should be used to illustrate different modes of nutrition. (g) Dental Formula Comparison should be made using dissected named bird and mammal. Description and functions of parts of the alimentary canal and modification of parts to Feeding in protozoa and mammals reflect their digestive functions should be mentioned. C. **Basic Ecological Concepts** Meaning of dental formula. Determination of 1. Ecosystem: the dental formulae of mammals. Arrangements of teeth in the jaw bones of Components of the ecosystem and herbivores, carnivores and of humans. sizes Importance of dental care in humans. Ecological components: (a) environment, biosphere, Reference should be made to feeding habits habitat, population, biotic in protozoa and mammals. community and ecosystem. Examples and explanation are required. Components of the ecosystem: Biotic and abiotic Importance of ecological factors common to Ecological factors: all habitat should be mentioned. The importance of ecological factors to Ecological factors in aquatic and population of animals and plants should be terrestrial ecosystems stressed 3. Simple Measurement of **Ecological** Factors. Physical factors: (a) Climatic, topographic and gaseous. Candidates should measure some of the ecological factors including humidity,

Edaphic factors: Chemical

(b)

temperature, wind speed, rainfall and light

	and physical composition, moisture content and soil texture.	intensity.
4.	Food webs and trophic levels	
	(a) Autotrophs and Heterotrophs	
	(i) Producers: autotrophs	Candidates should be able to classify
	(ii) Consumers: heterotrophs	organisms as producers, consumers and decomposers.
	(iii) Decomposers	
(b)	Trophic levels energy relationships  (i) Food chain	Aquatic and terrestrial producers, consumers and decomposers should be known.
	(ii) Food web	
(c)	Energy flow	Candidates should illustrate food
	(i) Food/Energy relationship in aquatic and terrestrial environment.	relationships in a food chain and food web using specific examples.
	(ii) Pyramid of energy and Pyramid of numbers.	
(d)	Decomposition in nature	Non-cyclic nature of energy transfer should be mentioned.
	(i) Decomposers:	
	<ul><li>(micro and macro-decomposers)</li><li>(ii) Gaseous products</li></ul>	Candidates should be able to construct and
	(iii) Role of decomposers	explain pyramid of energy, pyramid of numbers and point out the major differences between them.
		Candidates should observe demonstrations to show that carbon dioxide, hydrogen sulphide, heat energy are released during

		decomposition.
6.	Ecological Management:	
	(a) Biological Associations	
	Type of associations: Parasitism, symbiosis, commensalism and saprophytism.  (b) Adaptation of organisms to habitats.	Features of biological importance associated with each type should be mentioned. Named examples should be used to illustrate these associations.
	<ul><li>(c) Pollution of the atmosphere</li><li>(i) Nature, names, sources and effects of air pollutants.</li></ul>	Adaptations of plants and animals to environmental conditions with particular reference to differences in habitats should be mentioned.
	<ul><li>(ii) Effect of noise</li><li>(d) Water and Soil Pollution Type and effects of pollutants.</li></ul>	Examples of air pollutants should include carbon monoxide, sulphur dioxide, oxides of nitrogen, smoke, smog, dust and particles released into the air from factories. Health hazards and damage to the environment should be emphasized.  Harmful effect of noise from generators, aeroplane and electronic sound gadgets, e.t.c. should be mentioned.
		Water and soil pollutants to be studied include: synthetic substances (detergent), insecticides, artificial fertilizers, herbicides, sewage, domestic and industrial wastes, crude oil and decaying organic matter. The health

7. Ecology of population

- (a) Ecological succession
- (i) Structural changes in species composition, variety or diversity and increase in numbers.
- (ii) General characteristics and outcomes of succession
- (b) Primary succession.
  Succession in terrestrial and aquatic habitats.
- (c) Secondary succession, climax of the succession: characteristic of a stable ecosystem.
- (d) Factors that affect population size: natality, mortality, emigration, immigration, food shortage, predation, competition and diseases.
- (e) Preservation and storage of foods

(f) The life of selected insects;(i) Weevils and cotton strainers.

hazards and harmful effects of water and soil pollutants on organisms should also be mentioned. Mention should be made of oil spillage and its effects.

Candidates should study succession in an abandoned farmland, lawn, and in a pond over a period of time to discover a definite sequence of colonization by plants.

Reference should be made to population.

Description of various methods of preserving and storing food. The use of ionizing radiations (x-ray, etc) should be mentioned. Explanation of the biological basis of preserving and storing food. Local methods of preserving food such as drying, salting and smoking should be mentioned.

(ii) Control of pests

External features of weevils and cotton stainers, their mode of life, adaptation to their habitats and their economic importance.

- 8. Microorganisms: Man and health
- (a) Carriers of microorganisms

Various methods of pest control: physical, chemical biological, etc; and their advantages and disadvantages should be mentioned.

Effects of micro-organisms on our bodies

Examples of carriers: housefly; mosquitoes;

Candidates should perform experiments on

fermentation, curdling of milk etc. to

should be mentioned.

microorganisms.

tsetsefly should be mentioned.

illustrate the beneficial uses of

- (b) Microorganisms in action
  - (i) Beneficial effects in nature, medicine and industries.
  - (ii) Harmful effects of microorganisms, diseases caused by microorganisms: cholera, measles, malaria and ring worm.
- (c) Towards better Health
  - (i) Methods of .controlling harmful microorganisms: high temperature, antibiotics, antiseptics, high salinity and dehydration.
  - (ii) Ways of controlling the vectors.

The diseases should be studied with respect to the causative organisms, mode of transmission and symptoms.

Effects of these methods on the microorganisms should be mentioned.

### (d) Public Health:

The importance of the following towards the maintenance of good health practices:

- (i) Refuse and sewage disposal.
- (ii) Immunization, vaccination and inoculation (control of diseases).

Methods of controlling housefly and mosquito should be studied.

Candidates should be familiar with the proper methods of carrying out these public health practices in their community.

Various forms of immunization should be

<ul><li>D. Conservation of Natural Resources:</li><li>1. Resources to be conserved: soil, water, wildlife, forest and minerals.</li></ul>	mentioned. Explanation of the terms immunization, vaccination and inoculation. Candidates should be able to show how these terms are related.
2. Ways of ensuring conservation	
	The meaning and need for conservation of natural resources should be mentioned.  Problems of conservation should be mentioned in relation to economic and social development, overgrazing and poaching.  The following should be studied:
	(a) agencies responsible for
E. Variation in Population	conservation (b) conservation education
Morphological variations in the physical appearance of individuals	<ul><li>(c) conservation laws</li><li>(d) benefits of conservation.</li></ul>
(a) size, height and weight	Variation can be classified into morphological and physiological or continuous and discontinuous.
<ul><li>(b) colour (skin, eye, hair coat of animals)</li><li>(c) finger prints</li></ul>	Candidates are required to measure heights and weights of pupils of the same age group and plot graphs of frequency distribution of the height and weight.
(c) finger prints	Observe and record various skin colour,
<ul><li>2. Physiological Variations</li><li>(a) Ability to roll tongue</li></ul>	colour pattern of some animals (cow, goat, rabbits), colour pattern of plants (maize cob and leaves).
(b) Ability to taste phenylthiocarbamide (PTC)	Make finger prints and classify them into arches, loops, whorls and compounds.

	(c)	Blood groups (ABO) classification)	
F.	Biology of	f Heredity (Genetics)	
1.	Genetic ter	rminologies	
2.	Transmissio	on and expression of characteristics	
	in organ	isms.	Definition of the following basic genetic
	(a)	Hereditary variation	terms such as gene, genotype, phenotype, dominant, recessive, allele, locus, test cross, and back cross.
	(b)	Mendel's work in genetics	Reference should be made to characters that can be transmitted from generation to generation such as colour of skin, eye, hair, blood group, sickle cell, shape of face and
	(i)	Mendel's experiments	nose.
	(ii)	Mendelian traits	Mendel's experiment with red and white flowered peas should be mentioned.
	``		Mendel's experiment on monohybrid and dihybrid inheritance should be mentioned.
	(iii)	Mendelian laws	
3.	Chromosoi	mes: The basis of heredity	Reference should be made to dominant and recessive characters in plants and animals.
	(a) Str	ructure	
			Candidates should observe chromosomes in permanently prepared slides of cells and root tips of onion or lily. Candidates should study
	` '	Process of transmission of editary characters from	the structure of DNA and gene replication using models and charts.

parents to offspring. Probability in genetics (Hybrid formation). Segregation of genes at meiosis and 5. Linkage, sex determination and sex linked recombination at fertilization should be used characters. to explain the process of transmission of hereditary characters from parents to offspring. Application of the principles of heredity Computation of probability is **not** required. in: Explanation of the terms linkage, sex determination and sex linked characters such as haemophilia, colour blindness, baldness (a) Agriculture and hairy ear lobes. (b) Medicine Data on cross-breeding experiments should be studied. Examples of new varieties of crops and livestock obtained through cross-breeding should be mentioned. The advantages and disadvantages of cross-fertilization, out and G. Adaptation for survival and Evolution. inbreeding should be explained. 1. Behavioural Adaptations in Social Animals. The application of knowledge of heredity in marriage counseling with particular reference **Termites** (a) to sickle cell anaemia and rhesus factor (b) Bees should be mentioned. Candidates should be able to identify the various castes of social insects. The division of labour in social insects and the roles of different castes should be 2. Evolution. stressed. Examples of communication among animals such as contact notes and warning

<ul><li>(a) Evidence of evolution.</li><li>(b) Theories of evolution</li></ul>	cries should be mentioned. Reference should be made to basking by lizard, territorial behaviour in birds and lizards and behaviour of other animals under unfavourable conditions-hibernation and aestivation. The behaviour of an organism as a member of a group and the effect of grouping on the behaviour of an organism should be mentioned.  Candidates are expected to know the evolutionary trends in plants and animals such as from simple to complex structural adaptations and from aquatic to terrestrial organisms.  The role of mutation in evolution should be mentioned.  The following evidence of evolution should be mentioned: Paleontology (fossil records), comparative biochemistry, geographical distribution, comparative anatomy and physiology, adaptive radiation, comparative	
	embryology and systematics.  The contributions of Lamarck and Darwin to the development of the theory of evolution should be mentioned.	
SECT: (For candidates		
<ul><li>A. Introducing Biology</li><li>1. Biology as a science of life</li></ul>		

2.	Procedure for biological work	
		The meaning of biology. Candidates must be able to differentiate between a living thing and an organism. The two major branches of biology: Botany and zoology; specialized areas: bacteriology, molecular biology, histology, cell biology, ecology etc.
3.	Importance of Biology	
4.	Body symmetry, sectioning and orientation	Description of skills required by biologists in their work. The scientific method: Identifying the problem, defining the problem, hypothesizing, experimenting, recording, analyzing and concluding. Description of following steps for writing report on biological experiment or investigation: Aim, hypothesis/ scientific framework, materials/ drawing of set-up, method, results/ observation, discussion and conclusion.
5.	The microscope	Application of biology to everyday life. Careers associated with the study of biology.  Description of the following terms: (i) Body symmetry (bilateral and radial) (ii) Sectioning: longitudinal and transverse and vertical (iii) Body orientation of specimen:     anterior, posterior, lateral, dorsal and ventral views).  Distinction between (i) posterior and anterior views (ii) dorsal and ventral views (iii) transverse and longitudinal section  Examination of simple light, compound light and stereoscopic light microscopes and

		identification of the various parts.
6.	Biological drawings	Handling and caring for microscopes. Use of the light microscope to observe prepared slides. Techniques involved in the preparation of temporary slides of animal and plant cells. Mounting varieties of specialized eukaryotic cells. Drawing of cells as seen under the microscope.
<b>B.</b> 1.	Cell Biology  Movement of substances into and out of cells: Endocytosis and Exocytosis	Resolution and magnification of microscope. Determination of magnification of drawings. Measuring lengths using compound light microscope. Electron microscope should be mentioned
2.	Nucleic acids	Appropriate headings for biological drawings.  Magnification/ size of biological drawings.  Quality of biological drawings e.g. clarity of lines, neatness of labels, labels of biological drawings.
3.	DNA structure and replication, RNA transcription.	Explanation of the process of endocytosis (phagocytosis and pinocytosis) and exocytosis.
4.	Protein synthesis	Explanation of the term nucleic acid. Types of nucleic acids: Deoxyribonucleic acid (DNA) and ribonucleic acid (RNA). Basic chemical differences between DNA and RNA.
5.	Cell cycle	Description of double helix model of DNA structure by Watson and Crick. Processes of DNA replication and RNA transcription.
		Description of the process of protein synthesis. The roles of m-RNA, t-RNA, and r-RNA and ribosomes in protein synthesis must be emphasized. Importance of protein synthesis. Examples of proteins

### C. Life Processes in Living Things

- 1. Amoeba, Paramecium, and Euglena
- 2. *Spirogyra* and *Rhizopus*
- 3. Mosses and ferns

### D. Diversity of Living Things

- 1. Characteristics of some of the orders of Class Insecta
- 2. Identification of organisms using biological keys
- E. Interactions in Nature Soil
- F. Mammalian Anatomy and Physiology

synthesized by humans.

Explanation of the of the term cell cycle. Phases of the cell cycle [Interphase: G + S + G2 phases, Mitosis: M phase (karyokinesis and cytokinesis)]. The processes of mitosis and meiosis and their importance. Preparation of a squash of onion root tip and observing stages of meiosis under the microscope. Observing stages of meiosis in plant and animal cells (Permanent slides may be used).

External structure and life processes of *Amoeba*, *Paramecium*, and *Euglena*. Mounting of *Paramecium* and *Euglena* under the compound light microscope.

Structure of *Spirogyra* and *Rhizopus*. Nutrition and reproduction of *Spirogyra* and *Rhizopus*. Identification of stages of conjugation of *Spirogyra*.

Structure of mosses (*Brachymenium* and *Funaria*) and ferns (*Nephrolepis*, ( *Platycerium*, *Phymatodes*). Description of external features of mosses and ferns. Nutrition and reproduction in mosses. Reproduction in ferns.

Orders of Class Insecta (Odonata Orthoptera, Coleoptera, Hymenoptera, Hemiptera, Diptera, Isoptera, Lepidoptera, Dictyoptera, and Neuroptera).

1.	Dissection of a small mammal	Identification of organisms using numbered and dichotomous keys. Construction of identification keys.
2.	Transport: Structure of the mammalian heart.	Identification of mineral salts (Ca <sup>2+</sup> , Fe <sup>2+</sup> , Fe <sup>3+</sup> , Mg <sup>2+</sup> , K <sup>+</sup> , SO <sub>4</sub> <sup>-</sup> , NO <sub>3</sub> <sup>-</sup> , PO <sub>4</sub> <sup>-</sup> ) in a soil sample. Soil reclamation.
3.	Cellular respiration	
4.	Movement: (a) Muscles	The arrangement of internal organs of mammals. Functions of the internal organs. Candidates should be able to cut open a chloroformed mammal (guinea pig, rat, mouse and rabbit) and draw the internal organs.
		Mechanism of the heartbeat: excitation and contractions (SAN, AVN, Purkinge tissue)
5.	(b) Skeletal tissues	Determination of respiratory quotient (RQ) of different substrates. Explanation of the significance of RQ.
3.	Reproduction (a) Secondary sexual characteristics	Types of muscle (Smooth, striated and cardiac muscles). Description of how muscles bring about movement.
	(b) Prenatal/Antenatal care	Explanation of sliding filament model of muscle contraction.
G.	Plant Structure and Physiology	Description of the structure of skeletal tissues( Bones and cartilage).
1.	Morphology of monocotyledonous and dicotyledonous plants.	Physical changes that occur in males and females during puberty. The role of hormones in the development of secondary sexual characteristics in humans.
2.	Transport:	Meaning of antenatal care. Antenatal visits requirements. Nutrition and diet. Exercise during pregnancy. Benefits of the use of natural products by mother and child.

Г	C ** *:	
	Guttation	
3.	Reproduction: Floral formula	External features of monocotyledonous and dicotyledonous plants. Functions of roots,
<b>H.</b>	Humans and their Environment  Integrated water resources management.	stems and leaves of monocotyledonous and dicotyledonous plants. Differences between monocotyledonous and dicotyledonous plants. Modifications of roots, stems and leaves.  Biological principles underlying guttation.
2.	Health and hygiene  (a) Drug abuse	Determination and writing of the floral formulae of the following flowers: Flamboyant ( <i>Delonix</i> ), Pride of Barbados ( <i>Caesalpinia</i> ) and Rattle box ( <i>Crotalaria</i> ). Floral diagrams are <b>not</b> required.
	(b) Community health	Description of the integrated water resources management (IWRM). Explanation of how IWRM can reduce undesirable change in the environment.
I.	(c) First Aid  Evolution	Definition of terms: health, hygiene, and sanitation. Means of achieving personal cleanliness/ hygiene.
	Recombinant DNA Technology	
J.	Biology and Industry	Explanation of the term drug abuse. Consequences of drug abuse.
1.	Biology and water industry	Importance of town planning and its effects
	(a) Contamination of water	on health of the community.
	(a) Contamination of water	Explanation of the term First Aid. Different methods of administering First Aid.
	<ul><li>(b) Identification of polluted water</li><li>(c) Waste water treatment</li></ul>	Explanation of the term Recombinant DNA Technology and state its application.
1		

2.	Biology and fishing industry	
	(a) Fish stock management	Candidates should carry out experiments to test water samples for bacterial contamination.
	(b) Fish farming	The use of Biological Oxygen Demand (BOD) in the measurement of the level of organic pollution in water.
		Description of biological processes of purifying sewage. Cesspit activated sludge process should be mentioned.
3.	Biology and food industry: Food additives	Explanation of why fish is an efficient converter of plankton into flesh.  Description of ways of conserving fish stocks in water bodies.
4.	Biology and agriculture	Importance of fish farming. Advantages and disadvantages of fish farming.
5.	Biotechnology	Explanation of the term food additives. Identification of the categories of food additives (Naturally occurring and artificial food additives). Health implications in the use of food additives.
6.	Biological fuel generation	Explanation of the biological principles by which fertilizer, pesticides, selective breeding, resistance to disease and irrigation can respectively lead to successful agriculture.
		Explanation of the concept of biotechnology. The use of micro-organisms in the manufacture of food such as cheese, yoghurt, kenkey, bread and butter. The role of micro-organisms in the production of alcoholic drinks and organic acids. The role of micro-organisms in pharmaceutical, tanning and mining industries.

Explanation of the need for new sources of energy. The use of biogas, use of green crops to produce ethanol, the generation of hydrogen gas from chloroplasts should be

### SECTION C

(For candidates in Nigeria, Sierra Leone, The Gambia and Liberia)

### A. Concept of Living

- 1. Cell theory
- 2. Irritability as a basic characteristic of protoplasm
  - (a) Types of responses: taxis and nastism
  - (b) Environmental factors that evoke responses; temperature, pH etc
- 3. Excretory Systems
  - (a) Diseases of the kidney:

    Nephritis, kidney stone and diuresis,
    Their effects and remedies.
  - (b) Diseases of the liver: infective hepatitis, cancer of the liver and gall stones. Their effects and remedies.
- 4. Sense organs.
  - (a) Nose.
  - (b) Tongue.

The cell theory including the work of Hooke, Dujardin, Schleiden and Schwann should be outlined.

Excretory organs of earthworm and insects should be mentioned.

(c) The skin.

- 5. Reproduction
  - (a) Courtship behaviour in animals:
    - (i) Pairing
    - (ii) Display e.g. peacocks
    - (iii) Territoriality
    - (iv) Seasonal migration associated with breeding in herrings, eels and birds.
  - (b) Metamorphosis and life history of housefly.
  - (c) Adaptive features in a developing animal:
    - (i) Yolk in egg of fish, toad and birds for nourishment
    - (ii) Placenta in animals
  - (d) Germination of seeds
  - (i) Essential factors which affect developing embryo.
    - (ii) Types of germination

#### B. Plant and Animal Nutrition

- Nitrogen cycle
- 2. Modes of nutrition:

autotrophic, chemosynthetic, carnivorous plants

- 3. Alimentary System
  - (a) Alimentary tracts of different animals

The process of perception of smell including the roles of sensory cells in nose and olfactory lobes should be studied.

Experiments should be carried out to determine the different areas of the tongue associated with different tastes. The association between the organs of taste and smell should be mentioned. Mention should be made of taste buds.

The function of the skin as a sensory organ should be emphasized.

Courtship pattern in male and female animals and territorialism in lizards should be observed.

The content (yolk and albumen) of birds' egg should be examined

Candidates should observe the connection of the foetus to the mother and the adaptive

- (b) Description and function of various parts.
- features of the placenta, umbilical cord and amnion in a dissected pregnant rat. The meaning of oviparity and viviparity should be mentioned.

4. Feeding habits

Experiments to show the importance of oxygen, adequate moisture and suitable temperature, should be carried out.

(a) Categories: Carnivorous, herbivorous and omnivorous

The stages in hypogeal and epigeal germination should be observed and drawn

(b) Modifications and mechanisms associated with the following habits; filter feeding, fluid feeding, feeding adaptation in insects, saprophytic feeding, parasitic feeding etc.

The names and roles of bacteria involved in nitrogen cycle should be mentioned. Candidates to observe root nodules in leguminous plants.

## **C. Basic Ecological Concepts**

Examples of carnivorous plants should be studied.

1. Ecological Components:

(a)

(b)

(c)

Comparison should be made using dissected earthworm, grasshopper/cockroach to show

the important features of the alimentary canal.

Lithosphere, hydrosphere, atmosphere, niche

Use a bird and cockroach/grasshopper to show modifications for functions

- 2. Population Studies by Sampling
- 3. Energy transformation in nature:

Density

Population size

Dominance

- . Energy transformation in flature.
  - (a) Energy loss in the ecosystem
  - (b) Solar radiation: its intake and loss at the earth's surface.
  - (c) Energy loss in the biosphere.

Mosquito larva, housefly, butterfly, cockroach, adult mosquito, maize weevil, rhizopods, tapeworm should be used to illustrate the different types of feeding mechanisms and various modifications.

- 4. Nutrient Cycling in Nature
- (a) Carbon Cycle:
  - (i) Process of carbon cycle

Candidates are expected to explain and give examples of the terms.

(ii) Importance of carbon in nature.

Candidates are required to carry out a project to determine population density by counting the individual types of plants and animals and record such count in a given plot.

Laws of thermodynamics and its application to ecological phenomena should be mentioned. The laws of thermodynamics should be used to explain energy flow across tropic levels.

Candidates should discuss energy as a limiting factor in primary production i.e production of autotrophs.

Reference should be made to harvest as a means of measuring primary production.

- (b) Water Cycle:
  - (i) Importance of water cycle,
  - (ii) Importance of water to living organisms.
- 5. Ecological Management: Tolerance, Minimum and maximum range
- 6. Habitats
- (a) Aquatic habitat: marine, estuarine fresh water under the following headings:
  - (i) characteristics of habitat
  - (ii) distribution of plants and animals in the habitat,
  - (iii) adaptive features of plants and animals in the habitat.
- arid land should be studied under the following headings:
  - (i) characteristics of habitat
  - (ii) distribution of plants and animals in habitat

(b) Terrestrial habitat: marsh, forest, grass land,

Candidates should be able to draw the carbon cycle, list the sources of carbon (burning, respiration, decay) and discuss the relative importance of the cycle.

Reference should be made to carbon dioxide-oxygen balance in nature. Candidates should carry out experiments to show absorption of carbon dioxide and release of oxygen during photosynthesis.

Candidates should carry out experiments to show the presence of water in expired air and that water is given off during respiration.

Candidates should perform experiments to show the limit of tolerance of *Tilapia* to various concentrations of salt solution or sensitivity of wood lice to temperature.

(c) Balance in Nature

Dynamic equilibrium population and population density. Measurement of physical factors: temperature, salinity, light intensity, turbidity, current, pH, should be carried out. 7. Relevance of Biology to Agriculture: The pattern of distribution including dominant types and seasonal changes of population, size of organisms in the habitat (a) Classification of plants based on life cycle should be noted. (b) Effects of agricultural practices on ecology The measurement of the physical factors, temperature, relative humidity, light, wind, (i) Bush burning (ii) Tillage and pH should be carried out. (iii) Fertilizer (iv) Herbicide/pesticide Reference should be made to edaphic (v) Different farming methods factors. 8. Microorganisms: Man and His Health. The effect of physical factors on distribution of plants and animals should be (a) Microorganisms around us mentioned. (i) Microorganisms in air and water (ii) Groups of microorganisms: bacteria, viruses, some algae, protozoa and The process by which carnivores maintain a some fungi. constant population should be mentioned. (b) Microorganisms in our bodies and food (c) Public Health Food hygiene and health organization. Effects of human activities on ecological systems should be mentioned. D. Application of Variations Crime detection 1.

2.	Blood transfusion	
3.	Determination of paternity	
J.	Determination of paternity	
E. Evolut		
1. Adaptatio	n for survival	
(a)	Factors that bring about	Microorganisms in air, water and expired air
	competition	should be observed and identified by their colour, pattern of growth and appearance of
(b)	Intra and Inter-species	their colony.
( )	competition	
		Microorganisms under the finger nails, mouth
		cavity, expired air, and decomposing food substance should be observed and identified
(c)	Relationship between	by their colour, pattern of growth, and
	competition and succession	appearance of colony.
		Reference should be made to the roles of
		national and international health
		organizations in maintenance of good public health.
2. Structur	ral Adaptation for;	
(a) (b)	obtaining food protection and defense	The uniqueness of each individual's finger
	securing mates for	print should be mentioned in relation to crime
· ,	reproduction	detection.
(d)		Reference should be made to importance of
(e)	conserving water	knowledge of blood groups in blood
3. Adaptive	e Colouration	transfusion and determination of paternity.
(a)		
(0)	Colouration and their functions	
		Reference should be made to the factors such as food, space, water, light and mates which
		organisms share and form the basis of
		competition.

The effects of intra-species competition should be observed by growing many seedlings of maize in a small area, while the effects of interspecies competition can be observed by planting many seedlings of maize and pepper in a small area.

Candidates should observe competition

Candidates should observe competition and succession on a moistened exposed slice of bread over a period of time.

Candidates should observe examples of organisms that show structural adaptation for obtaining food, escaping from enemies, securing mates, regulating body temperature and conserving water.

Candidates are required to observe examples of adaptive colouration in plants and animals.
